DETAILED ACTION

This communication is in response to applicant's 10/21/2005

amendment(s)/response(s) in the application of OLLIS et al. for "ARCHITECTURE

FOR LINKING MULTIPLE INTERNET PROTOCOL TELEPHONY DEVICES HAVING

A COMMON TELEPHONE NUMBER" filed 08/24/2001. The amendments/response to the claims have been entered. Claim 3 has been canceled. No claims have been added. Claims 1-2, 4-38 are now pending.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 4-9, 12, 14-15, 20-23, 25-30, 33, 35, 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Kobayashi* (US 2001/0001361).

Regarding claims 1, 25, 38, *Kobayashi* discloses a method for connecting a plurality of devices and which are connected to a network (LAN network 3, see figure 1), comprising the steps of:

looking up the telephone number in a table that associates the telephone number with a plurality of devices having an address (the controller 100 associates telephone

Art Unit: 2661

extension numbers with the plurality of phones 200, 2001 having an address, see figure 1 and paragraph 0026-0027);

establishing a connection with at least one of the devices (as shown in figure 1, establishing a connection with a telephone 200);

establishing a bridge between that device and a secondary device (as shown in figure 1, the telephone 200 and telephone 201 are interconnect via LAN 1 and under the control of telephone controller 100).

Kobayashi, fails to explicitly disclose or silent on the plurality of device i.e. phones 200, 201 have a common telephone number.

Kobayashi, however, discloses assigning extension telephone number i.e. 100, 101 to each of the telephones (see figures 1 and 2). Also, it is well know in the art that extension telephone number used when there is a common telephone number.

Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention was made assigned a common telephone number to each of telephone 200 and 201 in order to allows a external telephone connected to the Internet to make a direct call to a telephone in a LAN while minimizing increase in the telephone numbers.

Regarding claim 2, *Kobayashi* discloses looking up the telephone number in a table is performed by a call agent (call agent 13, see figure 1 and paragraph 17).

Art Unit: 2661

Regarding claim 4, each device has a unique domain name (as shown in figures 2-5, each of the phone have a unique domain name).

Regarding claim 5, *Kobayashi* discloses the communication devices 24 are connected to gateways (router 3, see figure 1).

Regarding claim 6, *Kobayashi* discloses the call agent contacts a gateway, which establishes a connection with a first device (the telephone controller 100 in contacts with the router 3, see figure 1).

Regarding claims 7, 28, *Kobayashi* discloses the gateway contacted by the call agent establishes a bridge to a second gateway, to which a second device is attached (the telephone controller 100 attach to the router 3 and establishes a bridge to a second router, not shown, connected to internet 2, figure 1).

Regarding claims 8, 29, *Kobayashi* discloses the first gateway mixes information from both at least one device attached to the first gateway and at least one device attached to the second gateway (the telephone controller 100 attach to the router 3 and establishes a bridge to a second router, not shown, connected to internet 2, figure 1).

Art Unit: 2661

Regarding claims 9, 30, *Kobayashi* discloses the devices comprise a voice-only telephone (telephony services 200, 201, see figure 1).

Regarding claims 12, 33, *Kobayashi* discloses Voice over Internet Protocol is used to communicate with the devices (see paragraph 0004).

Regarding claims 14, 35, *Kobayashi* discloses the network is attached to the Internet (LAN network 1 is attached to the Internet 2, see figure 1).

Regarding claim 15, *Kobayashi* discloses the network attached to the Internet is an Internet Protocol network (see paragraph 0025).

Regarding claims 20-22, *Kobayashi* discloses or inherently the bridge is established via an Ethernet or CMT, or which ever device is first answered (the link 16 is 10BASE-T or 100BASE-TX Ethernet connection, see paragraph 25).

Regarding claim 23, *Kobayashi* discloses the bridge conveys audio information (VOIP, see paragraph 4).

Regarding claim 26, *Kobayashi* discloses gateways to which the devices are connected (the telephones 200, 201 are connected to router 3, see figure 1).

Art Unit: 2661

Regarding claim 27, *Kobayashi* discloses the call agent contacts a gateway, which establishes a connection with a first device (see figure 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10-11, 24, 31-32, 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Kobayashi*.

Regarding claims 10-11, 24, 31-32, 34 *Kobayashi* fails to disclose at least the devices comprises of a video telephone or the devices is established using media gateway control protocol (MGCP).

However, it would have been obvious to one having ordinary skill in the art at the time of invention was made replace the telephones 200 or 201 or both with video telephone and establishing the connection between the devices using media gateway control protocol (MGCP) for providing multimedia capable telephone call to the users.

Claims 16-19, 36-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Kobayashi* in view of *Moon* et al. (US 5904038), hereinafter *Moon*.

Regarding claim 16-19, and 36-37, *Kobayashi* fails to explicitly disclose the network connected to PSTN.

Art Unit: 2661

Moon, on the other hand, discloses the POP 60a is connected to both the PSTN 10 and WAN 30 (see figure 1).

Therefore,, it would have been obvious to one having ordinary skill in the art at the time of invention was made to replace the gateway 3 of *Kobayashi* with POP 60a of *Moon* connecting the router to both PSTN and Internet for providing the caller with option to choose between IP telephony call or PSTN call.

Conclusion

Any response to this action should be mailed to:

The following address mail to be delivered by the United States Postal Service (USPS) only:

Mail Stop _____ Commissioner for Patents P. O. Box 1450 Alexandria, VA 22313-1450

or faxed to:

(703) 872-9306, (for formal communications intended for entry)

Or:

The following address mail to be delivered by other delivery services (Federal Express (Fed Ex), UPS, DHL, Laser, Action, Purolater, Hand Delivery, etc.) as follow:

U.S. Patent and Trademark Office 220 20th Street South Customer Window, Mail Stop _____ Crystal Plaza Two, Lobby, Room 1B03 Arlington, VA 22202. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Bob A. Phunkulh** whose telephone number is **(571) 272-3083.** The examiner can normally be reached on Monday-Tursday from 8:00 A.M. to 5:00 P.M. (first week of the bi-week) and Monday-Friday (for second week of the bi-week).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor **Chau Nguyen**, can be reach on (571) 272-3126. The fax phone number for this group is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
